Procurement of Building Innovative Solutions
FINAL CONFERENCE

Innovation Procurement for building into practice
From PPI concepts to tender's technical specifications

OPEN INCET,
November 16th 2016

How to ameliorate public purchasing for building renovation? How to introduce innovative technologies and solution into public tenders? How to establish a win-win dialogue among procurers and suppliers? How to allow innovative companies to participate into public tenders, being public procurers “launching customers”? Public procurement accounts for about 19% of GDP in the European Union and it is an enormous potential market for innovative products and services. Public procurement practices can help foster market uptake of innovation, whilst improving the quality of public services in markets where the public sector is a significant purchaser. PROBIS (Procurement of Building Innovative solutions) is a project funded by European Commission that has the general objective to test Public Procurement for Innovation (PPI) in increasing energy efficiency and sustainability of European buildings.

The project has launched and awarded four public procurement procedures for the refurbishment of buildings with innovative solutions, in Italy, Sweden and Hungary. During the conference, results of the four tenders will be presented and discussed, with the scope to make available to EU public procurers the experiences generated by the project and to analyze the possibility of implementation of further Innovation Procurement actions in the framework of the new EU Public Procurement Directive and national regulations.

The conference will be given in English, with simultaneous translation

How to register

The participation is free. To register please visit:
